Model Identification

LVC [] - [] [] [] []

Size

- 04 = 1/4 DIN
- 08 = 1/8 DIN V
- 09 = 1/8 DIN H
- 16 = 1/16 DIN

Input

- 1 = Thermocouple
- 2 = RTD

Alarm

- 0 = No
- 1 = One*
- 2 = Two*

Set Point 2

- 0 = None
- 2 = Switched Voltage
- 3 = Mechanical Relay
- 5 = 4 to 20 mA

Set Point 1

- 2 = Switched Voltage
- 3 = Mechanical Relay
- 5 = 4 to 20 mA

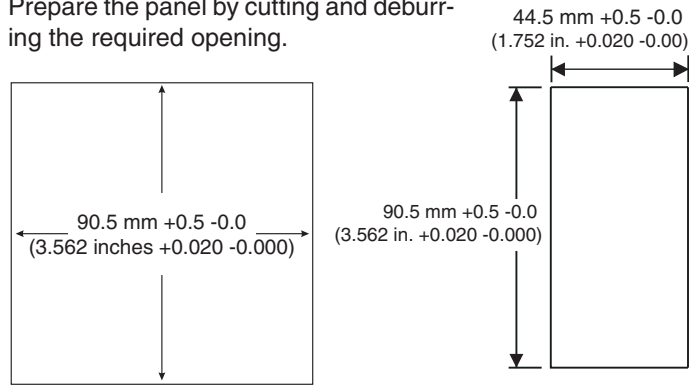

*Two alarms only available on 1/4 and 1/8 DIN units. 1/16 DIN units available with Alarm or Dual Set Point, but not both.

INSTALLATION

Mount the instrument in a location that will not be subject to excessive temperature, shock, or vibration. All models are designed for mounting in an enclosed panel.

Select the position desired for the instrument on the panel. If more than one instrument is required, maintain the minimum of spacing requirements as shown on the drawing below. Closer spacing will structurally weaken the panel, and invalidate the IP66, UL type 4X rating of the panel.

Prepare the panel by cutting and deburring the required opening.

LCV04 - 1/4 DIN

LCV08 - 1/8 DIN Vertical

LCV16 - 1/16 DIN

LCV09 - 1/8 DIN Horizontal

Allow a minimum spacing between instruments of a minimum of 70 mm (2.756 inches) vertically on center, and 65 mm (2.559 inches) horizontally on center.

Panel Cut Out Dimensions in millimeters (inches)

	A	B	C	D
LCV16	44.5+0.5 (1.752+0.020)	44.5+0.5 (1.752+0.020)	65 (2.559)	70 (2.756)
LCV09	90.5+0.5 (3.562+0.020)	44.5+0.5 (1.752+0.020)	65 (2.559)	70 (2.756)
LCV08	44.5+0.5 (1.752+0.020)	90.5+0.5 (3.562+0.020)	65 (2.559)	70 (2.756)
LCV04	90.5+0.5 (3.562+0.020)	90.5+0.5 (3.562+0.020)	65 (2.559)	70 (2.756)

From the front of the panel, slide the housing through the cut out. The housing gasket should be against the housing flange before installing.

From the rear of the panel slide the mounting clips into the slotted channels molded into the housing. Hold the housing with one hand and using the other hand, push the mounting clips firmly against the panel until the spring loops are slightly compressed. The ratchets will hold the mounting clip and housing in place.

To remove, press the tab on the mounting clip to release the ratchets.

CAUTION: It is not necessary to remove the instrument chassis from the housing for installation. If the instrument chassis is removed from the housing, you must follow industry standard practice for control and protection against Electro-Static Discharge (ESD). Failure to exercise good ESD practices may cause damage to the instrument.

WIRING

Do not run RTD, thermocouple, or other class 2 wiring in the same conduit as power leads. Use only the type of thermocouple or RTD probe for which the control has been programmed. Maintain separation between wiring of sensor, optional inputs and outputs and other wiring. See the "Secure Menu" for input selection.

For thermocouple input always use extension leads of the same type designated for your thermocouple.

For supply connections use No. 16 AWG or larger wires rated for at least 75°C. Use copper conductors only. All line voltage output circuits must have a common disconnect and be connected to the same pole of the disconnect.

Input wiring for thermocouple, current, and RTD; and output wiring for current and 15 VDC is rated CLASS 2.

Control wiring is as shown (view is from rear of instrument showing wiring terminals).

Wiring for LCV04

INPUT WIRING

Wire inputs as shown in the chart below.

Terminals	19	20	17
Thermocouple	+	-	
RTD - 3 wire	A	B	B
RTD - 2 wire*	A	B & J	J (Jumper 3 to 4)

Key: '+' = positive; '-' = negative; 'A' = 'odd' colored lead; 'B' = 'common' leads; 'J' = Jumper.

F1 - 0.1 A @ 250 VAC

Alarm 1

Set Point 2
or Alarm 3

Set Point 1

OUTPUT WIRING

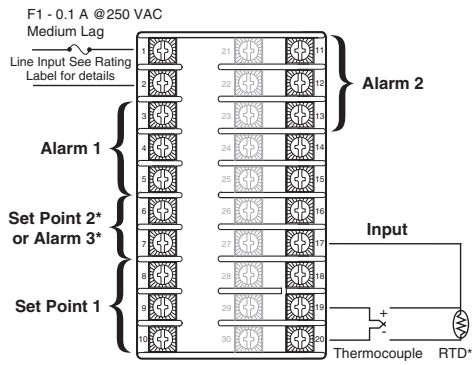

Wire outputs as shown in the chart below.

Terminals	3	4	5	6	7	8	9	10	11	12	13	
SP1 Pulsed DC									+	-		
SP1 Relay							NO	NC	C			
SP1 Current									+	-		
SP2* Pulsed DC				+	-							
SP2* Relay				C	NO							
SP2* Current				+	-							
Alarm 1		NC	NO	C								
Alarm 2										NC	NO	C
Alarm 3*					C	NO						

Key: '+' = positive; '-' = negative; 'NC' = Normally Closed; 'NO' = Normally Open; 'C' = Common.

* Set Point 2 and Alarm 3 share the same output terminals. Only one designation is possible. See the Model code to determine the correct output/designation for your instrument.

Wiring for LCV08 and LCV09

INPUT WIRING

Wire inputs as shown in the chart below.

Terminals	19	20	17
Thermocouple	+	-	
RTD - 3 wire	A	B	B
RTD - 2 wire*	A	B & J	J (Jumper 17 to 19)

Key: '+' = positive; '-' = negative; 'A' = 'odd' colored lead; 'B' = 'common' leads; 'J' = Jumper.

OUTPUT WIRING

Wire outputs as shown in the chart below.

Terminals	3	4	5	6	7	8	9	10	11	12	13
SP1 Pulsed DC							+	-			
SP1 Relay						NO	NC	C			
SP1 Current							+	-			
SP2* Pulsed DC				+	-						
SP2* Relay				C	NO						
SP2* Current				+	-						
Alarm 1		NC	NO	C							
Alarm 2								NC	NO	C	
Alarm 3*				C	NO						

Key: '+' = positive; '-' = negative; 'NC' = Normally Closed; 'NO' = Normally Open; 'C' = Common.

* Set Point 2 and Alarm 3 share the same output terminals. Only one designation is possible. See the Model code to determine the correct output/designation for your instrument.

Wiring for LCV16

WIRING

Wire as shown in the chart below.

Terminals	2	3	4	5	7	8	9	10
Thermocouple							+	-
RTD 3-wire					B		B	A
RTD 2-wire (jumper 9 to 7)					J		J&B	A
Current/Voltage					+			-
SP 1 Pulsed DC			+	-				
SP1 Relay			C	NO				
SP1 Current			+	-				
SP2* Pulsed DC	+	-						
SP2* Relay	C	NO						
SP2* Current	+	-						
Alarm 1*	C	NO						

Key: '+' = positive; '-' = negative; 'A' = 'odd' colored lead; 'B' = 'common' leads; 'J' = Jumper; 'NC' = Normally Closed; 'NO' = Normally Open; 'C' = Common.

* Set Point 2 and Alarm 1 share the same output terminals. Only one designation is possible. See the Model code to determine the correct output/designation for your instrument.

Before using please check whether range, input and output match your requirement.

1. Front panel instruction

1.1 Main Display

PV Process value 4 digit display (red color)

SV Setting value 4 digit display (green color)

1.2 LED Indicators

	Output 1	green color
	Output 2	green color
	Auto Tune	yellow color
	Alarm 1	red color
	Alarm 2*	red color
	Alarm 3*	red color
	Manual*	yellow color

 Y1 Percent Output* green color

(Percent Output only enabled when Manual is selected. Lamps will light to indicate approximate output. Display is vertical on LVC09. Not available on LVC16.)

* Not available on all Models

1.3 KEYS

-  MODE SET key
-  SHIFT key
-  DOWN key
-  UP key
-  Auto/Manual key*

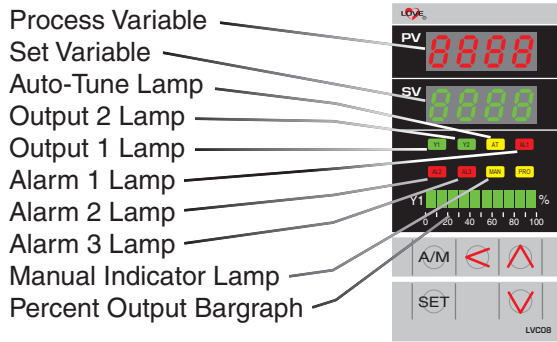

LVC04

LVC09

LVC08

LVC16

2 Auto tuning

2.1 Once Pt is set YES auto tuning is started.

2.2 After auto tuning is finished, the PID parameters are set automatically.

2.3 $Pt\ Off$ = auto tuning offset and it will be subtracted from the SV (used to prevent over-shoot during auto tuning)

$SV - Pt\ Off$ = Auto-tuning value

$Pt\ Off$ = auto tuning offset (Example: if $SV = 200$ and $Pt\ Off = 5$, Auto tuning point is at 195)

$Pt\ Off$ is the amount of offset from set point where auto tuning occurs.

2.4 Causes for failure of Auto tuning feature

2.4.1 $Pt\ Off$ value is too large. (If not sure set $Pt\ Off = 0$)

2.4.2 System response time is too long. (Set PID parameters individually)

LED	DESCRIPTION
$in\ OE$	Open circuit of main control sensor.
$AdCF *$	A/D converter failed.
$CJCE *$	Cold junction compensation failed.
$in\ SE$	Open circuit of sub control sensor.
$UUU1$	PV exceeds USPL.
$nnn1$	PV under LSPL.
$UUU2$	Input signal of sub control exceeds the upper limit.
$nnn2$	Input signal of sub control under the lower limit.
$rRnF *$	RAM failed.
$intF$	Interface failed.
$PtUF$	Auto tuning failed.

NOTE: If an error designated with the asterisk "*" appears, return the control for service.

3. Error Code information

4. Programming and Operation Flow Charts

4.1 LEVEL 1 (User Level)

4.1.1 Press the **SHIFT KEY**  to change the parameters. If the **SHIFT KEY**  is pressed the first (rightmost) digit begins blinking. Press the **UP KEY**  or **DOWN KEY**  to increase or decrease the value of the digit, then press the **SHIFT KEY**  again to go to the next digit. When the data entry is complete, press **SET KEY**  to enter the value. If you go too far, press the **SET KEY**  to cycle around to the digit you wish to modify.

4.1.2 The **SET KEY**  also has the function of changing MODEs. If the **SET KEY**  is pressed, the display shows the next MODE.

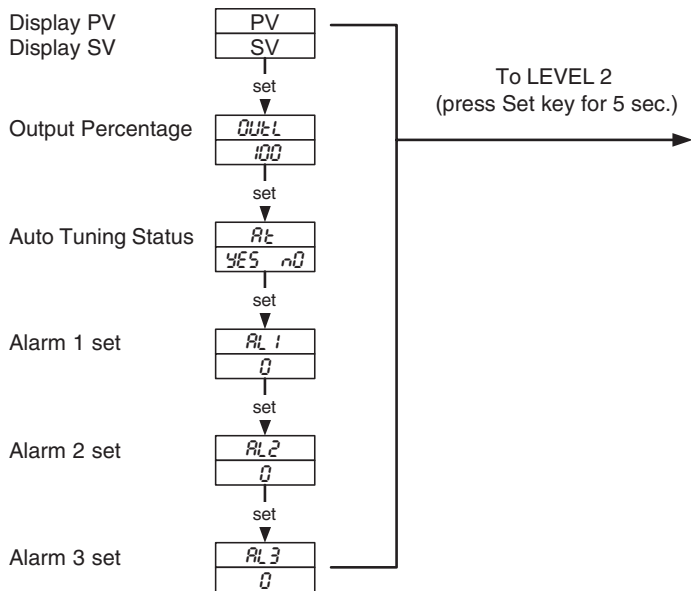

4.1.3 Press and hold the **SET KEY**  for 5 seconds. The display goes to LEVEL 2. Repeat to return LEVEL 1.

4.1.4 If no keys are pressed for 1 minute, the display will go to LEVEL 1.

4.1.5 Press the **A/M KEY**  to force the display to go to LEVEL 1, regardless of the current selection.

4.1.6 If **OUTL** set "0", the controller has no output.

4.1.7 LEVEL 1 FLOW CHART

4.2 LEVEL 2 (PID Level)

Press SET **SET** key for 5 seconds to enter Level 2.

P1	Set Point 1	Range 0-200%
3	Proportional Band	ON/OFF at P=0
↓ Set		
I1	Set Point 1	Range 0~3600 Sec
240	Integral Time	Integral OFF at I=0
↓ Set		
D1	Set Point 1	Range 0~900 Sec
60	Derivative Time	Derivative OFF at D=0
↓ Set		
db1	Set Point 1	Dead time compensation
0	Dead-band Time	Range 0~1000 Sec
↓ Set		
Auto	Set Point 1	Range 0~ <i>USPL</i>
0	Auto tuning off-set	
↓ Set		
Cycle	Set Point 1	Output (SSR = 1, 4~20mA = 0, Relay >= 10). Range 0~150 Sec.
10	Proportional Cycle	
↓ Set		
HYS1	Set Point 1	For ON/OFF control only
1	Hysteresis	Range 0~1000
↓ Set

0	Gap (Output 1)	"OFF" early to SV
↓ Set		
GAP2	Sub Control	For 2 output use only, set the volume turning
0	Gap (Output 2)	"ON" early to SV
↓ Set		
LLP	Function Lock	
0000		
↓ Set		
Return P1	<i>LLP = 0 100</i> , To enter Levels 1 & 2 and to change their parameters	
	<i>LLP = 0 110</i> , To enter Levels 1 & 2 and to change Level 1 parameters only.	
	<i>LLP = 000 1</i> , To enter Level 1 only and to change SV only	
	<i>LLP = 0 10 1</i> , Unable to change any parameter except <i>LLP</i>	
	(Over this Level please contact our local distributor)	

4.3 LEVEL 3 (INPUT Level)

When $LCI=0000$ press SHIFT key  and SET key , hold for 5 seconds to enter LEVEL 3.

LEVEL 3

$inP i$ 00	Main Control input selection	Select the input range. Refer to input Selection Chart on Page 23.
↓ Set		
$RnL i$ 0	Main Control Analog Zero set	When $Rn i$ through $Rn5$ are selected for $inP i$, set to low end of range to be displayed.
↓ Set		
$RnH i$ 5000	Main Control Analog Span set	When $Rn i$ through $Rn5$ are selected for $inP i$, set to high end of range to be displayed.
↓ Set		
dP 0000	Decimal point	To set the position of decimal point
↓ Set		
$LSPL$ $0 0$	Lower set point limit	To set the lowest point within $inP i$
↓ Set		
$USPL$ $400 0$	Upper set point limit	To set the highest point within $inP i$
↓ Set		
$RnL2$ 0	Analog Remote SP Scale low end set	It is used as input code are $Rn i$ to $Rn5$ Range $LSPL-USPL$
↓ Set		
$RnH2$ 5000	Analog Remote SP Scale high end set	Same as $RnL2$
↓ Set		
$ALd i$ $0 i$	Alarm mode for AL1	Range: 00~19 (see Chart on Pages13~14) Used with program function
↓ Set		
$ALt i$ 10	Time set for Alarm 1	Range 0~99.59 minutes. 0 = Flicker Alarm; 99:59=continuous; >1 and <99:59 = delay time.
↓ Set		
$ALd2$ $0 i$	Alarm mode for AL2	Range: 00~19 (see Chart on Pages13~14)
↓ Set		
$ALt2$ 0	Time set for Alarm 2	Same as $ALt i$
↓ Set		
$ALd3$ $0 i$	Alarm mode for AL3	Range: 00~19 (see Chart on Pages13~14)
↓ Set		
$ALt3$ 0	Time set for Alarm 3	Same as $ALt i$
↓ Set		
$HYSR$ 0	Hysteresis of alarm	Range: 0~1000
↓ Set		
$LCI i$ 150	Main Control calibration	Calibrate the low value of input Range $LSPL-USPL$ (current output only)
↓ Set		

<div style="display: flex; justify-content: space-between;">CH013500</div> <div style="text-align: center; font-size: small;">↓ Set</div>	Main Control Calibration high	To calibrate the high value of output Range: 0-9999 (current output only)
<div style="display: flex; justify-content: space-between;">CL02150</div> <div style="text-align: center; font-size: small;">↓ Set</div>	Sub control Calibration low	Same as CL01

<div style="display: flex; justify-content: space-between;">UNITF</div> <div style="text-align: center; font-size: small;">↓ Set</div>	Unit of PV & SV	Select C, F, or A (analog = no descriptor)
<div style="display: flex; justify-content: space-between;">SOFT1000</div> <div style="text-align: center; font-size: small;">↓ Set</div>	Soft filter (don't care)	Adjust the response time of PV (the larger value, the faster the input response) Range 0.05-1.00.
<div style="display: flex; justify-content: space-between;">CR50</div> <div style="text-align: center; font-size: small;">↓ Set</div>	don't care	
<div style="display: flex; justify-content: space-between;">MODEHEAL</div> <div style="text-align: center; font-size: small;">↓ Set</div>	Action mode	Select HEAL or COOL.
<div style="display: flex; justify-content: space-between;">OPRDPI</div> <div style="text-align: center; font-size: small;">↓ Set</div>	Control action	Select PI or SFZ
<div style="display: flex; justify-content: space-between;">FREQ50Hz</div> <div style="text-align: center; font-size: small;">↓ Set</div>	Frequency	Select 50Hz or 60Hz.
Return to INP1		

4.4.3 FUNCTION OF LCK

LCK=0000 allows entry to Level 3 (press SET  +  for 5 sec.)

LCK=1111 allows entry to Level 4 (press SET  +  for 5 sec.)

LCK=0100 allows entry to Level 1 & 2 and access to view and change their parameters.

LCK=0110 allows entry and viewing of Level 1 & 2 but allows changes to Level 1 parameters only.

LCK=0001 allows entry and viewing of Level 1 but allows changes to the SV only.

LCK=0101 prevents changes to all parameters except *LCK*.

4.4 LEVEL 4 (SET Level)

Level 4 allows selection or suppression of various menu items. After programming, menu items may be locked out to prevent inadvertent alteration. When $L\bar{L}L=1111$, press the SET key  and the SHIFT key  for 5 seconds to enter Level 4. Use the SET  key to switch the high order set value (0.# through 9.#)

4.4.1 Display

4.4.2 Function of SETs

There are ten sets, each with four binary settings that control whether specified menu item(s) appear. The following chart shows the menu items associated with each set. The values shown are the Factory values.

CAUTION: Changing items listed as 'RESERVED' may cause unpredictable behavior of the instrument. DO NOT CHANGE RESERVED SETTINGS WITHOUT DIRECT INSTRUCTIONS FROM THE FACTORY.

5. INPUT

6. ALARM

6.1 Alarm function selection

CODE	DESCRIPTION	INHIBIT
00 - 10	None (alarm functions disabled)	
01	Deviation high limit alarm	YES
11	Deviation high limit alarm	NO
02	Deviation low limit alarm	YES
12	Deviation low limit alarm	NO
03	Deviation high / low limit alarm	YES
13	Deviation high / low limit alarm	NO
04 - 14	Deviation high / low limit range alarm	NO
05	Absolute value high limit alarm	YES
15	Absolute value high limit alarm	NO
06	Absolute value low limit alarm	YES
16	Absolute value low limit alarm	NO
07	Segment end alarm (for optional programmer function only)	-
17	Program active alarm (for optional programmer function only)	-
08	System error alarm on	-
18	System error alarm off	-
09		-
19	On delay timer alarm	-

6.2 Alarm action description

▲ = SV △ = Alarm set value
 Inhibit function suppresses alarm action until PV moves across the Alarm set value from alarm condition to normal condition. If PV re-crosses the Alarm set point the alarm will activate.

00 10	None (alarm inactive)
01	Deviation high alarm with inhibit
11	Deviation high alarm without inhibit
02	Deviation low alarm with inhibit
12	Deviation low alarm without inhibit
03	High & low alarms with inhibit
13	High & low alarms without inhibit
04 14	Band alarm
05	Absolute high alarm with inhibit

15	Absolute high alarm without inhibit
06	Absolute low alarm with inhibit
16	Absolute low alarm without inhibit
07	Reserved function. Do not use.
17	Reserved function. Do not use.
08	System error alarm
18	System error alarm
09	Reserved function. Do not use.
19	Alarm delay timer When PV>=AL value, alarm action is suppressed for the period set in ALT. When time elapses, alarm output is enabled.

7. Changing Input from T/C Type to RTD Type

CAUTION: It is recommended that the appropriate input type be ordered from the Factory. If you have ordered the correct input type (see order code), it is not necessary to make the change(s) listed here.

To change the input from **T/C** to **RTD** type, use a low wattage soldering iron to place a solder short on the PCB pads as shown in the diagram below.

To change the unit back from **RTD** input to **TC** type, heat the pads and remove the solder with a solder remover or solder wick.

96 x 96 48 x 96 96 x 48
(PC Board)

RTD = PAD SHORT
TC or mV = PAD OPEN

48 x 48
(PC Board)

RTD = PAD SHORT
TC or mV = PAD OPEN

8. Modification of output from "HEAT/ALARM" to "HEAT/COOL"

CAUTION: It is recommended that the appropriate output type be ordered from the Factory. If you have ordered the correct output type (see order code), it is not necessary to make the change(s) listed here.

To change the input from **Heat/Alarm** to **Heat/Cool** type, use a low wattage soldering iron to place a solder short on the PCB pads as shown in the diagram below.

To change the unit back from **Heat/Cool** input to **Heat/Alarm** type, heat the pads and remove the solder with a solder remover or solder wick.

HEAT WITH ALARM
96 x 96 - 48 x 96 - 96 x 48
(PC Board)

48 x 48
(PC Board)

HEAT / COOL
96 x 96 - 48 x 96 - 96 x 48
(PC Board)

48 x 48
(PC Board)

SPECIFICATIONS

Selectable Inputs: Thermocouple, RTD, DC Voltage, or DC Current selectable.

Input Impedance:

Thermocouple = * megohms minimum.

RTD current = * μ A.

Sensor Break Protection: Upscale.

Set Point Range: Selectable (See Input Ranges Page ##).

Display: Two 4 digit, 7 segment LEDs.

LVC04: PV display is *mm (* in.) high, SV is *mm (* in.)

LCV09: PV and SV displays are *mm (* in.) high.

LVC08:

LVC16:

Control Action: Reverse (usually heating), Direct (usually cooling) selectable.

Proportional Band: 1 to 9999 °F, °C, or counts.

Reset Time (Integral): Off or 0.1 to 99.9 minutes.

Rate Time (Derivative): Off or 0.01 to 99.99 minutes.

Cycle Rate: 1 to 80 seconds.

On - Off Differential: Adjustable 1° F, 1° C, or 1 count to full scale in 1° F, 1° C, or 1 count steps.

Alarm On - Off Differential: 1° F, 1° C, or 1 count.

Fuzzy Percent: 0 to 100%.

Fuzzy Rate: Off or 0.01 to 99.99 counts per second.

Fuzzy Band: Off or 1 to 4000 °F, °C, or counts.

Accuracy: $\pm 0.2\%$ of span, ± 1 least significant digit.

Resolution: 1 degree or 0.1 degree, selectable.

Line Voltage Stability: $\pm 0.05\%$ over the supply voltage range.

Temperature Stability: 100 ppm / °C typical, 200 ppm / °C maximum.

Common Mode Rejection: 140 db minimum at 60 Hz.

Normal Mode Rejection: 65 db typical, 60 db at 60 Hz.

Isolation:

Relay and SSR outputs: 1500 Vac to all other inputs and outputs.

SP1 and SP2 Current outputs: 500 Vac to all other inputs and outputs, but not isolated from each other,

SP1 and SP2 Switched Voltage outputs: 500 Vac to all other inputs and outputs, but not isolated from each other.

Process Output (934, 936): 500 VAC to all other inputs and outputs.

Supply Voltage: 85 to 265 Vac, 50 ~ 60 Hz. single phase.

Power Consumption: 4VA maximum.

Operating Temperature: 0 to +50 °C (+32 to 122 °F).

Storage Temperature: -25 to +65 °C (-13 to 149 °F).

Humidity Conditions: 50 to 85% non-condensing.

Memory Backup: Nonvolatile memory. No batteries required.

Control Output Ratings:

Relay: SPST, 3 A @ 240 Vac resistive; 1.5A @240 Vac inductive; Pilot duty rating 240 VA, 2 A @ 120 Vac or 1 A 240 Vac.

Alarm Relay: SPST, 3 A @ 240 Vac resistive; 1/10 HP@ 120 Vac.

Current (isolated): 0 to 20 mA across 600 ohms maximum.

Switched Voltage (isolated): 15 Vdc @ 20 mA.

Panel Cutout:

LVC04: PV display is *mm (* in.) high, SV is *mm (*

in.)

LCV09: PV and SV displays are *mm (* in.) high.

LVC08:

LVC16:

Depth Behind Mounting Surface: 80 mm (3.150 in.)
maximum.

Weight: 220 g (8 oz).

Agency Approvals: CE.

Front Panel Rating: IP54.
